

iPhone Agent

Mukammal User Guide — Roman Urdu

USA business onboarding + personal assistant · hybrid online/offline · version V2

Guide version: 1.0 · Sep 2026

IS GUIDE MEIN

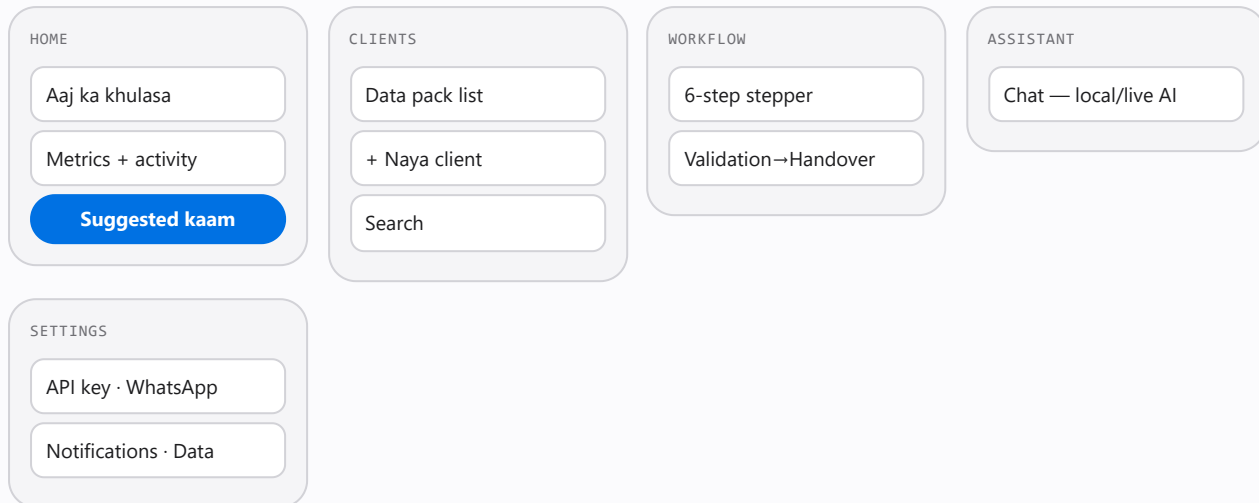

1. App kya hai — ek nazar mein
2. Pehli dafa kya set karein
3. Naya client ka data add karna (step-by-step)
4. Client par kaam — 6-step Workflow
5. Handover note + WhatsApp par bhejna
6. Assistant — online aur offline
7. Settings — API key, WhatsApp, notifications, data
8. Status chips aur ONLINE/OFFLINE ribbon
9. Bar-bar pooche jaane wale sawal (FAQ)
10. Safe-use ki 3 pakki rules

1. App kya hai — ek nazar mein

iPhone Agent aap ka haath wala ops assistant hai. Do kaam ek saath karta hai:

- **USA onboarding:** clients ke liye bank/merchant research, sign-up prefill plan, KYC handover aur website checklist
- **Personal assistant:** EIN, KYC, high-risk, bank shortlist jaisay sawalon ke jawab — online bhi, offline bhi

App ke 5 hisse (neeche ki tab bar)

Data kahan rehta hai?

Sab data sirf **aapke iPhone ke browser (localStorage)** mein rehta hai — koi server, koi company, koi cloud nahi. App band karne par kuch nahi gaya. Internet ho ya na ho — data wahi rehta hai.

2. Pehli dafa kya set karein

1. **Settings** tab kholein (neeche right corner)
2. **WhatsApp number** likhein — country code ke saath, jaise `+92 300 1234567` → **Number save karein** button dabayein
3. (Optional) **Live AI** ke liye API base URL + API key + model likhein → **Save** → **Test connection** se check karein. Key ke baghair bhi app poora chalta hai — local brain mode mein
4. (Optional) **Notifications** chip ko ON karein — lekin yad rakhein: yeh sirf installed PWA par kaam karta hai (Section 10.2 dekhein)

API key kya hai aur kahan se aati hai?

Live AI ke liye kisi OpenAI-compatible service ka key chahiye (jaise OpenAI `sk-...`, ya Zhipu/Z.ai GLM). Key sirf आपके device par rehti hai aur sirf आपके endpoint par jaati hai. Na mili ho to chain ki baat — **local brain** onboarding ke saare kaam offline kar deta hai.

3. Naya client ka data add karna

Yeh app ka sab se important kaam hai. Poora flow:

- 1 **Clients tab kholen** — neeche bar mein doosra button. Koi client nahi hai to "**Pehla client add karein**" button dikhega, warna upar right mein "+ **Naya client add karein**".
- 2 Form khulega — **data pack** ke fields bharnе hain. Har field jo required hai uske aage * ka nishan hai.

FIELD	KYA LIKHEIN	EXAMPLE	NOTE
Legal name *	Business ka asli qanooni naam	Ahmed Traders LLC	Bank application mein yahi jaata hai
Entity type *	LLC / C-Corp / S-Corp / Partnership / Sole Prop	LLC	Dropdown se chunein
State of formation *	Jis state mein company bani hai	Wyoming	Registered agent wali state
EIN *	IRS ka 9-number ID	84-1234567	Format zaroori: XX-XXXXXXX — warna app error dikhayega
City + ZIP *	Business address	Sheridan 82801	Virtual office ho to bhi chalega
Industry / keywords *	Business kis cheez ka hai	ecommerce, home goods	Risk classification isi se hoti hai — imandari se likhein
Monthly volume	Andaza — USD mein	25000	Optional, lekin research ke liye kaam aata hai
Owner/signer naam *	Jo application sign karega	Ahmed Raza	Sirf naam — SSN/ITIN yahan kabhi nahi
Owner residency *	US citizen / resident / Non- resident	US resident	Banks filter isi par lagate hain
Website	Business ki site	https://...	Optional; ho to risk check behtar hota hai

3 Save — validation chalayen button dabayein. App data pack ko turant check karta hai: koi field ghalat ya adhoori ho to us field ke neeche red error likha aata hai — wahi theek karein, dubara Save.

4 Save hote hi app aapko us client ke **Workflow** par le jaati hai — wahan se asli kaam shuru (Section 4).

EIN ka format ghalat ho to kya hoga?

App error dikhayegi: "EIN ka format XX-XXXXXXX hona chahiye". Lehaz: dashes ke saath likhein, jaise 84-1234567 — 9 numbers total, pehle 2, phir 7.

4. Client par kaam — 6-step Workflow

Har client ka apna workflow stepper hai. App khud batata hai agla step kaunsa hai — jo step abhi karna hai us par **NEXT** chip hoti hai, mukammal steps par **DONE**. Step ke andar "**Chalayein**" button dabate hi step mukammal ho jaata hai.

#	STEP	APP KYA KARTA HAI	AAP KYA DEKHENGE
1	Data pack validation	Pack mukammal hai ya nahi — form shuru karne se pehle	Green: "Pack mukammal hai" ya red missing-items ki list
2	Risk classification	Industry keywords se low/medium/high risk	Risk level + expectations (high-risk par warning)
3	Bank & processor research	Curated shortlist: 4 banks + 4 processors, har ek par note aur VERIFY link	Candidate list — har link official page kholta hai; apply se pehle signer-eligibility check karein
4	Prefill plan (Sec 1–3)	Client ke data ko application ke section 1–3 ke map mein lagata hai	Note: Sec 1 Business, Sec 2 Ownership, Sec 3 Industry — phir STOP marker Sec 4 par
5	KYC handover note	Client ke liye mukammal note banata hai + WhatsApp/copy buttons	Tayyar note — Section 5 dekhein
6	Website approval checklist	Merchant review ke liye 5-item checklist	Checkboxes — har item ka status save hota hai

Sab se important rule — KYC boundary

App Sec 1–3 (business data entry) tak kaam karti hai. **Sec 4 (ID upload, selfie/video verification), Sec 5 (certification/e-sign) aur final submit hamesha client khud karta hai.** App aapko is kaam par koi shortcut nahi deti — aur na de, yehi iski gaurant hai. SSN/ITIN, ID photos, OTP codes **kabhi bhi** app mein na likhein.

5. Handover note + WhatsApp

- 1 Client ka **Workflow** kholein → **Step 5 — KYC handover note** tak pohnchein
- 2 Note tayyar dikhta hai — is mein hai: kitne sections mukammal, client ko kya karna hai (login, ID upload, selfie, certification), kaunsi docs tayyar rakhein, aur security reminder
- 3 **WhatsApp par bhejin** button dabayein — WhatsApp khulega aur note client ke chat mein **draft message** ki shakal mein tayyar ho jayega. Aap sirf send karein
- 4 Client ka number pehle **Settings** mein save hona zaroori hai — warna button grey rehta hai

Note ka shape (example)

Ahmed Traders LLC — Mercury

Form details Sec 1–3 tak mukammal hain (business, ownership, industry & volume).

Ab aap ke kaam (10–15 min): 1) Login karein... 2) Sec 4 — photo ID upload + selfie 3) Sec 5 — certification khud tick karein.

Docs tayyar rakhein: photo ID, proof of address. **Zaroori: SSN/ID/OTP chat mein kabhi na bhejin.**

Copy button note ko clipboard par copy karta hai — WhatsApp ke ilawa email ya kisi bhi channel mein bhej sakte hain.

6. Assistant — online aur offline

Assistant (4th tab) ek chat hai jo do dimaag chalaati hai — upar chip dikhati hai kaunsa chal raha hai:

CHIP	MATLAB	JAWAB KAHAN SE
LIVE AI	Net + API key set hai	Aapke endpoint ka model — naye sawal, deeper jawab
LOCAL BRAIN	Net hai lekin key nahi, ya bilkul offline	App ke andar ka embedded knowledge — EIN, KYC, risk, banks, checklist

Likhte hi kya karein: neeche box mein sawal likhein → **send** (upar arrow). Kuch ready sawal chips ki shakal mein bhi hain — tap karein to seedha jawab. Live AI fail ho (network ya key ka masla) to app khud **local brain se jawab de kar** aage kaam chala leti hai — aap ka likha hua input mehfooz rehta hai.

7. Settings — sab options

OPTION	KAISE
AI endpoint (base URL + key + model)	Save → Test connection. Key device par hi rehti hai.
WhatsApp number	Country code ke saath. Handover note isi par jaata hai.
Notifications	Task-complete alerts. Installed PWA (iOS 16.4+) par hi milte hain.
Data export	Saare clients ka JSON clipboard par — API key shamil nahi hoti (suraksha).
Clear data	Sab delete — confirm popup ke baad. Wapas nahi aata, soch ke karein.

8. Status chips aur ribbon

CHIP	MATLAB	AGLA KAAM
PACK INCOMPLETE	Data pack adhoora	Client khol kar Workflow step 1 dekhein — missing fields list mein hain
HIGH RISK	High-risk niche mili (CBD, dropshipping, crypto, gambling waghera)	Expectations pehle client ko bata dein — approval guarantee nahi
KYC PENDING	Data mukammal, handover abhi nahi bheja	Workflow step 5 → WhatsApp note
READY	Saare 6 steps mukammal	Agle client par, ya Assistant se research

Top ribbon: **ONLINE · LIVE AI** = net + key; **ONLINE · LOCAL BRAIN** = net par key nahi; **OFFLINE · LOCAL BRAIN** = net nahi — app phir bhi chalti hai.

9. FAQ — bar-bar pooche sawal

Naya client ka data add karne mein koi shortcut?

Home screen ke suggestion card se bhi seedha ja sakte hain. Data pack jitna mukammal hoga, workflow utna smooth — adhoore pack par validation hi ruk jaati hai (yeh jaan boojh kar hai).

Internet band ho jaye to kya hota hai?

Kuch nahi hota — clients, steps, chat sab local rehta hai. Risk check, prefill plan, handover note aur checklist sab offline chalti hain. Net wapaa aate hi ribbon update ho jaata hai.

Data kabhi gayab ho sakta hai?

Browser ka data clear kiya jaye ya "Clear data" dabaya jaye to jaata hai. Is liye behtar hai hafta-war **Data export** kar ke JSON apne paas rakhna.

Kya main ek hi app par kai clients chala sakta hoon?

Haan — koi limit nahi. Har client ka apna workflow aur progress alag save rehta hai.

Client kisi aur shahar/country mein hai to?

Koi farq nahi — onboarding USA business ka hai, client duniya mein kahin bhi ho sakta hai. Bas signer ki residency field sahi bharein — banks ka filter isi par chalta hai.

Live AI ka jawab ghalat lagta hai to?

AI jawab "verify current official source" ki taakid ke saath deta hai. Bank/processor policies aksar badalti hain — koi bhi decision official page (VERIFY links) dekh kar lein.

10. Safe-use ki 3 pakki rules

Rule 1 — Sensitive data kabhi app mein nahi

SSN, ITIN, passport/ID photos, selfies, bank passwords, OTP — yeh sirf client khud bank/processor ke official portal mein daalta hai. Na chat mein, na client form mein, na Settings mein.

Rule 2 — Attestation aur submit hamesha client ka

App data entry tak jaanti hai (Sec 1–3). "I certify", Terms of Service, e-sign, final Submit — yeh client ke apne kaam hain. App is liye Sec 4 par khud ruk jaati hai.

Rule 3 — Approval kabhi guarantee nahi

Koi bhi bank/processor approval ya fees ki zubaan na de. High-risk client ko pehle hi saaf bata dein: reserves, lambi underwriting, mehdud options mumkin hain.
